October 2026

01
Introduction

Why this theme exists

Lists: Spectral-Stick Bullets

- Level-one items carry a blue spectral stick.
- Wrapped lines re-indent to the text column, and the stick never inflates line spacing (it is *smashed* to zero height).
  - Level two carries a shorter orange stick.
    - Level three, a shorter one still.
- Enumerated items use bold blue numerals:
  1. first,
  2. second.

Blocks: Flat Tinted Cards

A block

Blocks are flat tinted cards — no beamer title bars.

An alerted block

For warnings, problems, and honest caveats.

An example block

For results and takeaways.

Equations and Credits

The theme sets no math fonts — Latin Modern throughout:

$$\mathbf{H}(t) \;=\; \mathbf{H}_0 \;+\; \sum_k u_k(t)\,\mathbf{C}_k, \qquad |\psi\rangle \;\mapsto\; e^{-i\mathbf{H}t}|\psi\rangle.$$

- Two-column layouts align at the top.
- Charts, tables, and figures behave as usual.

A block in a column

Cards inside columns work too.

Author, Journal **1**, 123 (2025).

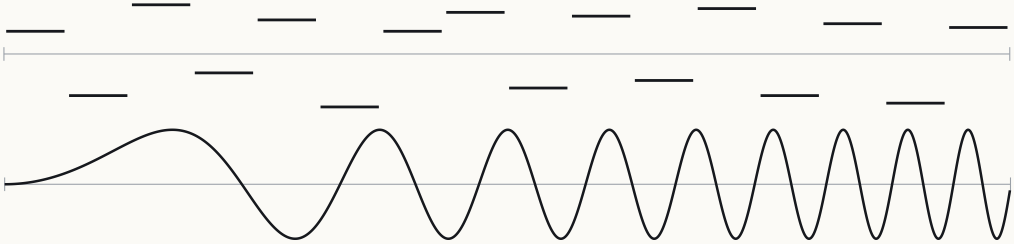

02
Methods

The pulse waveforms

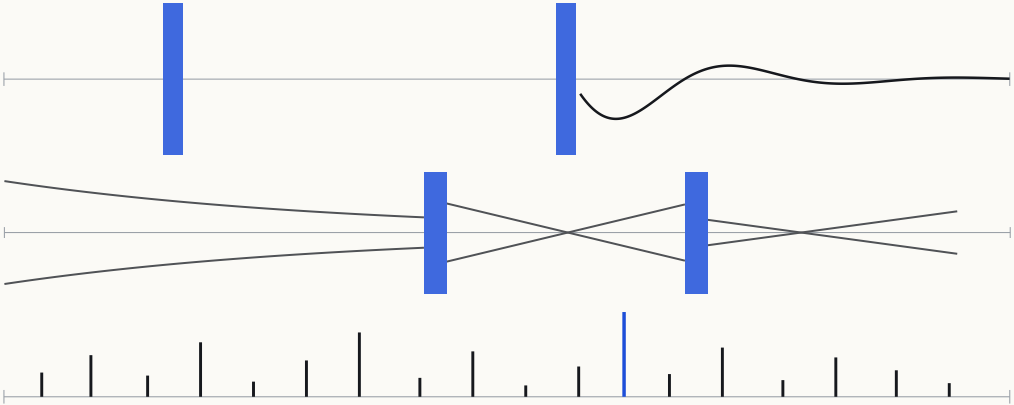

Divider Waveforms I

Divider waveforms are usable anywhere:

GRAPE steps; chirp.

Divider Waveforms II

Ramsey pair; echo train; stick spectrum.

03

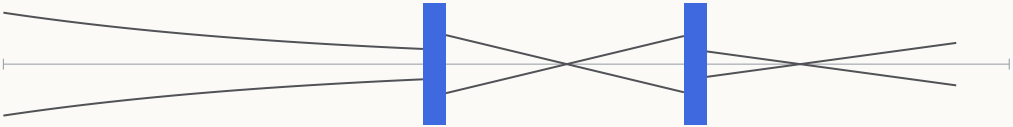

Results

Reading the frequency axis

04
Outlook

Fourth part, echo-train waveform

The Frequency-Axis Footline

- The footline is an axis: hairline with end ticks, part boundaries at fractions `fa`, `fb`, `fc`.
- Roman numerals label the four parts.
- A blue dot marks the current frame: $\mathrm{dot} = \mathrm{frame}/\texttt{total}$.
- Set the geometry once the deck is final:

```
\axisset{fa=0.236, fb=0.418, fc=0.727, total=55}
```

Thank you

Questions?

Backup

Anticipated questions

B1: A Backup Slide

Backup slides keep the axis footline; the divider carries a stick spectrum with one highlighted line.

Provenance note.
